

ISO 9001:2008 is an international standard of a quality management system for an organization. Many organizations choose to implement this standard to demonstrate their capabilities to consistently provide products that meet customers as well as statutory and regulatory requirements.

The team allocated for the implementation of this standard faces many challenges right from identifying the appropriate documentation requirements to managing the change since the requirements of this standard changes the way the organization manages its processes.

ProcessLOGIX Academy of Management System offers a unique course that prepares the delegate to build and deploy an highly effective quality management system that satisfies the certification requirements of ISO 9001:2008

Course objectives:

- Complete understanding of the process approach and PDCA mechanism in the context of management systems
- Selection of right approach for designing the quality management system model
- Skills and techniques pertaining to managing the deployment project
- Compliance of all documentation requirements of ISO 9001:2008
- Knowledge of certification bodies and the certification process with regards to ISO 9001:2008

After completion of the course, an online assessment of the delegates will be conducted to test the knowledge acquired. The successful delegates would be awarded with “PAMS Certified Lead Implementer – ISO 9001” and the rest would get Certificate of Attendance.

The successful delegates will also get an opportunity to participate in a live project with ProcessLOGIX.
